

### Practical 3A):

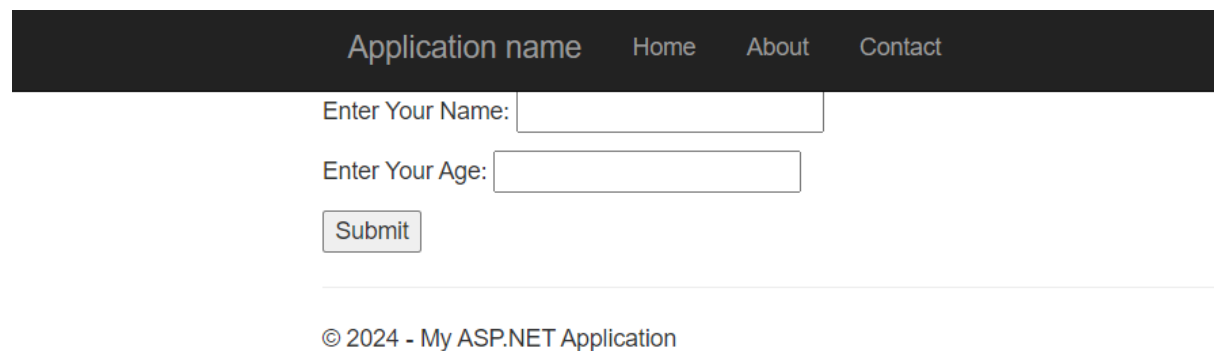

**Aim :** Create a simple web page with various server controls to demonstrate setting and use of their properties. (Example : AutoPostBack)

### Code :

```
<%@ Page Title="" Language="vb" AutoEventWireup="false" MasterPageFile="~/Site.Master"
CodeBehind="WebForm4.aspx.vb" Inherits="WebApplication3.WebForm4" %>
<asp:Content ID="Content1" ContentPlaceHolderID="MainContent" runat="server">

    <p>
        Enter Your Name:
        <asp:TextBox ID="TextBox1" runat="server"></asp:TextBox>
    </p>
    <p>
        Enter Your Age:
        <asp:TextBox ID="TextBox2" runat="server"></asp:TextBox>
    </p>
    <p>
        <asp:Button ID="Button1" runat="server" Text="Submit" />
    </p>
</asp:Content>
```

### Output :

The screenshot displays a web application interface. At the top, there is a dark navigation bar with the text 'Application name' and three links: 'Home', 'About', and 'Contact'. Below the navigation bar, the main content area contains a form. The form has two text input fields. The first field is preceded by the label 'Enter Your Name:' and the second by 'Enter Your Age:'. Below these fields is a button labeled 'Submit'. At the bottom of the page, there is a footer that reads '© 2024 - My ASP.NET Application'.
